

Disclosure on listing criteria

Minimum standards for displaying search results to buyers

This disclosure is being published as required under Clause 2.4.2 (g), Chapter 2 Business Rules (third proviso to Clause 2.3.3 (k)), ONDC Network Policy.

Buyer App Name: Dreamvaca

Network Participant: Thirty3 Fundos Technology Private Limited (ONDC organisation 15368)

Role: Buyer Network Participant

Domain/category applicable on: Retail (B2C) v1.2 · Logistics (B2C) v1.2 · Ride Hailing v2.0.0 · Accommodation Booking v2.0.0 · Reserved Ticket Booking v2.0.0 · Insurance v2.0.0

Date of release	Version no.	Changes made in this version
17 August 2026	1.0	First release. Published ahead of commencing transactions on the ONDC Network.

Criteria used to reject search results received from Seller Apps

Below are the criteria used by Dreamvaca to reject any search results received from Seller Apps. Each criterion is objective and quantifiable: it states the field, threshold or check applied, so that a Seller App can determine for itself whether a response would be listed.

S.No.	Listing criteria	How's the criteria measured over the ONDC Network?
1	The on_search callback fails cryptographic signature verification	The Authorization header is parsed for keyId="subscriber_id ukId ed25519", the sending Seller App's signing_public_key is resolved from the ONDC Registry /lookup, a BLAKE2b-512 digest of the exact received bytes is recomputed, and the signature is Ed25519-verified. Any result that fails this check is rejected in full and the callback is NACKed. Binary pass/fail; no partial trust.
2	The callback signature is outside its own validity window	The `created` and `expires` values in the Authorization header are compared against server time. A signature whose `expires` is in the past, or whose `created` is in the future, is rejected. Measured in seconds.
3	The response arrives after the transaction correlation deadline	Each outbound action records a pending row keyed on context.message_id. A matching on_search arriving more than 30 seconds after the request is not shown to the buyer, because by then the buyer has already been told the search returned nothing from that participant. Measured in seconds from request dispatch.
4	The catalogue item carries no quoted price for the buyer's requested parameters	The item must carry a quote total in INR for the exact dates, party size or quantity the buyer entered. An item with no price, a zero price, or a price expressed only as an indicative "from" value is not listed as bookable. Measured as: quote.price.value present, numeric and greater than zero.
5	The catalogue item carries no cancellation or refund terms	The item must carry cancellation terms we can display verbatim to the buyer before they commit. An item with no cancellation_terms block is not listed. Measured as: presence of a non-empty cancellation terms structure on the item.
6	The provider or item is marked inactive, withdrawn or out of stock by the Seller App	Any item whose status is reported as inactive, withdrawn, deactivated, or whose available quantity is zero, is removed rather than shown as unavailable. Measured as an exact match against the status values the Seller App reports.

Whitelisting criteria for Seller Apps

Dreamvaca applies no whitelisting criteria to Seller Apps. Every Seller App registered on the ONDC Network for a domain in which Dreamvaca is a Buyer Network Participant is eligible to have its search responses listed, subject only to the objective rejection criteria in the table above. No Seller App is excluded on the basis of identity, size, or any commercial relationship with Dreamvaca or its group companies.

S.No.	Whitelisting requirement	Definition of successfully qualifying the whitelisting criteria
1	None applied	Not applicable. No whitelisting criteria are used.

What every listed result carries

A result that is not rejected by the criteria above is displayed to the buyer with: the identity of the Seller App fulfilling it; the total price in INR for the exact parameters the buyer entered, inclusive of all taxes and charges; and the cancellation and refund terms applicable to it, reproduced in the provider's own words rather than paraphrased. Results from different Seller Apps are blended into a single ranked list and are deliberately not de-duplicated. The same underlying property, vehicle or service may therefore appear more than once at more than one price, because those are genuinely different offers carrying different terms. Each row identifies the Seller App fulfilling it.

Status on the network

As at 17 August 2026, every business profile held by Thirty3 Fundos Technology Private Limited under ONDC organisation 15368 is at "Integration in Progress". Dreamvaca has not yet commenced transactions on the ONDC Network. This disclosure describes the criteria implemented in the Buyer Application as at the date of release, and is published ahead of go-live rather than after it.

Version control

This is version 1.0, released 17 August 2026. The current version, the full changelog and all previous versions are published at <https://dreamvaca.in/en/ondc> and are updated whenever the criteria below change.
