

Disclosure on sorting parameters

Sorting parameters along with their relative importance

This disclosure is being published as required under Clause 2.4.2 (e), Chapter 2 Business Rules (first proviso to Clause 2.3.3 (k)), ONDC Network Policy.

Buyer App Name: Dreamvaca

Network Participant: Thirty3 Fundos Technology Private Limited (ONDC organisation 15368)

Role: Buyer Network Participant

Domain/category applicable on: Retail (B2C) v1.2 · Logistics (B2C) v1.2 · Ride Hailing v2.0.0 · Accommodation Booking v2.0.0 · Reserved Ticket Booking v2.0.0 · Insurance v2.0.0

Date of release	Version no.	Changes made in this version
17 August 2026	1.0	First release. Published ahead of commencing transactions on the ONDC Network.

Parameters used to rank and sort search results

Below are the parameters used by Dreamvaca to rank/sort search results received from various Seller Apps. These parameters are listed in descending order of priority, i.e. the sorting parameter of the highest weightage is listed topmost.

Rank Number	Sorting parameter	How's the parameter measured in the ONDC Network	Weight
1	Total quoted price for the buyer's requested parameters, ascending	The value of quote.price.value in INR on the on_search response, for the exact dates, party size or quantity the buyer entered — inclusive of all taxes, supplier charges and Dreamvaca's margin. Compared as an integer number of paise. This is the complete ranking function: results are ordered on this number alone.	100%

Parameters explicitly NOT used

A parameter with zero weight that is never declared is indistinguishable from a weight that is hidden. The following are therefore named and denied rather than omitted.

Parameter	Treatment
Seller App identity, or any commercial relationship with Dreamvaca	Not used. No Seller App can pay for, or otherwise obtain, a position in the ranked list. Weight 0%.
Dreamvaca's own margin on the transaction	Not used. Ranking compares the price the buyer would pay. A result is never promoted because it is more profitable to us. Weight 0%.

Tie-breaking

Two results at the same total price are ordered by Seller App subscriber id and then by item id, both ascending. The rule is deterministic, so the same search returns the same order every time, and it is independent of any commercial relationship with the Seller App.

No de-duplication across Seller Apps

Results from different Seller Apps are blended into a single ranked list and are deliberately not de-duplicated. The same underlying property, vehicle or service may therefore appear more than once at more than one price, because those are genuinely different offers carrying different terms. Each row identifies the Seller App fulfilling it.

Buyer-selected sorting

A buyer may replace the default ranking. A chosen sort replaces it entirely: the buyer's choice is not blended with any weighting of ours. The options offered are: Total price, ascending (the default); Total price, descending; Duration or trip length, where the item carries one; Seller App or provider rating, where the Seller App publishes one. Filters a buyer applies — price range, rating, cancellation policy, departure time — remove results from the list. They never re-weight the order of the results that remain.

Status on the network

As at 17 August 2026, every business profile held by Thirty3 Fundos Technology Private Limited under ONDC organisation 15368 is at "Integration in Progress". Dreamvaca has not yet commenced transactions on the ONDC Network. This disclosure describes the criteria implemented in the Buyer Application as at the date of release, and is published ahead of go-live rather than after it.

Version control

This is version 1.0, released 17 August 2026. The current version, the full changelog and all previous versions are published at <https://dreamvaca.in/en/ondc> and are updated whenever the criteria below change.
